The Dublin Core Metadata Element Set

Abstract: Defines fifteen metadata elements for resource description in a cross-disciplinary information environment.

An American National Standard
Developed by the
National Information Standards Organization

Approved February 20, 2013
by the
American National Standards Institute

About NISO Standards

NISO standards are developed by the Standards Committees of the National Information Standards Organization. The development process is a strenuous one that includes a rigorous peer review of proposed standards open to each NISO Voting Member and any other interested party. Final approval of the standard involves verification by the American National Standards Institute that its requirements for due process, consensus, and other approval criteria have been met by NISO. Once verified and approved, NISO Standards also become American National Standards.

This standard may be revised or withdrawn at any time. For current information on the status of this standard contact the NISO office or visit the NISO website at: www.niso.org

Foreword

(This foreword is not part of *The Dublin Core Metadata Element Set*, ANSI/NISO Z39.85-2012. It is included for information only.)

About This Standard

The *Dublin Core Metadata Element Set* is a vocabulary of fifteen properties for use in resource description. The name “Dublin” is due to its origin at a 1995 invitational workshop in Dublin, Ohio; “core” because its elements are broad and generic, usable for describing a wide range of resources.

The fifteen element “Dublin Core” described in this standard is part of a larger set of metadata vocabularies and technical specifications maintained by the Dublin Core Metadata Initiative (DCMI). The full set of vocabularies, *DCMI Metadata Terms* [DCMI-TERMS], also includes a set of resource classes (including the *DCMI Type Vocabulary* [DCMI-TYPE]), vocabulary encoding schemes, and syntax encoding schemes. The terms in DCMI vocabularies are intended to be used in combination with terms from other, compatible vocabularies in the context of application profiles and on the basis of the *DCMI Abstract Model* [DCAM].

In 2006, the DCMI Usage Board undertook an editorial review of terms in the Dublin Core Metadata Element Set (DCMES) in order to clarify intended semantics and bring the wording of their definitions and usage comments into line with the language of the DCMI Abstract Model [DCAM]. A set of proposed changes was posted for Public Comment from August 28 to September 25, 2006. A face-to-face Usage Board meeting in Manzanillo, Mexico, on September 30, 2006 resulted in the publication on December 18, 2006 of a decision text, a response to comments, and revised terms documentation.

The current 2012 version of the standard deleted a sentence about the spatial or temporal topic of the resource from the usage comments for dc:subject. The definitions of Subject and Coverage clearly overlap because a “spatial or temporal topic of the resource” is also a “topic of the resource.” The intent of the dc:subject usage comment was to provide guidance for users who prefer to use Dublin Core elements in non-overlapping ways. It had, however, been suggested that this comment creates ambiguity, for some readers, about whether the definitions really overlap. This ambiguity was avoided by simply removing the sentence.

This revision of the original standard corresponds to version 1.1 on the Dublin Core Metadata Initiative website that resulted from the editorial review and public comment period described above.

All changes made to terms of the Dublin Core Metadata Element Set since 2001 have been reviewed by a DCMI Usage Board in the context of a *DCMI Namespace Policy* [DCMI-NAMESPACE]. The namespace policy describes how DCMI terms are assigned Uniform Resource Identifiers (URIs) and sets limits on the range of editorial changes that may allowably be made to the labels, definitions, and usage comments associated with existing DCMI terms.

NISO Voting Pool Members

The following organizations were members of the Voting Pool that approved this standard; individuals listed are the voting representatives for the member organization.

American Geophysical Union (AGU)

Jon Sears

American Library Association (ALA)

Nancy Kraft

American Psychological Association (APA)

Janice Fleming

The Dublin Core Metadata Element Set

1 Purpose and Scope

The Dublin Core Metadata Element Set is a standard for cross-domain resource description. As in Internet RFC 3986, *Uniform Resource Identifier (URI): Generic Syntax*, this specification does not limit the scope of what might be a resource.

The elements described in this standard are typically used in the context of an application profile which constrains or specifies their use in accordance with local or community-based requirements and policies. The specification of such implementation detail is outside the scope of this standard.

3 Definitions

The following terms, as used in this standard, have the meanings indicated.

Term	Definition
DCMI	the Dublin Core Metadata Initiative, maintenance agency for the Dublin Core Metadata Element Set
Lifecycle of a resource	a sequence of events that mark the development and use of a resource Some examples of events in a lifecycle are: conception of an invention, creation of a draft, revision of an article, publication of a book, acquisition by a library, transcription to magnetic disk, migration to optical storage, translation into English, and derivation of a new work (e.g., a movie).
Resource	anything that might be identified (the same definition as in Internet RFC 3986 and in the DCMI Abstract Model)

4 The Element Set

In the element descriptions below, each element has a descriptive label (“label”) for human consumption and a unique token (“name”) for use in machine processing.

In accordance with the *DCMI Namespace Policy* [DCMI-NAMESPACE], the “name” of an element is appended to a DCMI namespace URI to construct a Uniform Resource Identifier as a globally unique identifier for that element. The use of element names and URIs in the context of different implementation technologies is explained in *DCMI Encoding Guidelines* [DCMI-ENCODINGS].

5 The Elements

Element Name: title

Label:	Title
Definition:	A name given to the resource.

Element Name: creator

Label:	Creator
Definition:	An entity primarily responsible for making the resource.
Comment:	Examples of a Creator include a person, an organization, or a service. Typically, the name of a Creator should be used to indicate the entity.

Element Name: subject

- Label:** Subject
- Definition:** The topic of the resource.
- Comment:** Typically, the subject will be represented using keywords, key phrases, or classification codes. Recommended best practice is to use a controlled vocabulary.

Element Name: description

- Label:** Description
- Definition:** An account of the resource.
- Comment:** Description may include but is not limited to: an abstract, a table of contents, a graphical representation, or a free-text account of the resource.

Element Name: publisher

- Label:** Publisher
- Definition:** An entity responsible for making the resource available.
- Comment:** Examples of a Publisher include a person, an organization, or a service. Typically, the name of a Publisher should be used to indicate the entity.

Element Name: contributor

- Label:** Contributor
- Definition:** An entity responsible for making contributions to the resource.
- Comment:** Examples of a Contributor include a person, an organization, or a service. Typically, the name of a Contributor should be used to indicate the entity.

Element Name: date

- Label:** Date
- Definition:** A point or period of time associated with an event in the lifecycle of the resource.
- Comment:** Date may be used to express temporal information at any level of granularity. Recommended best practice is to use an encoding scheme, such as the W3CDTF profile of ISO 8601 [W3CDTF].

Element Name: type

Label: Type

Definition: The nature or genre of the resource.

Comment: Recommended best practice is to use a controlled vocabulary such as the *DCMI Type Vocabulary* [DCMITYPE]. To describe the file format, physical medium, or dimensions of the resource, use the Format element.

Element Name: format

Label: Format

Definition: The file format, physical medium, or dimensions of the resource.

Comment: Examples of dimensions include size and duration. Recommended best practice is to use a controlled vocabulary such as the list of *Internet Media Types* [MIME].

Element Name: identifier

Label: Identifier

Definition: An unambiguous reference to the resource within a given context.

Comment: Recommended best practice is to identify the resource by means of a string conforming to a formal identification system.

Element Name: source

Label: Source

Definition: A related resource from which the described resource is derived.

Comment: The described resource may be derived from the related resource in whole or in part. Recommended best practice is to identify the related resource by means of a string conforming to a formal identification system.

Element Name: language

Label: Language

Definition: A language of the resource.

Comment: Recommended best practice is to use a controlled vocabulary such as RFC 4646.

Element Name: relation

- Label:** Relation
- Definition:** A related resource.
- Comment:** Recommended best practice is to identify the related resource by means of a string conforming to a formal identification system.

Element Name: coverage

- Label:** Coverage
- Definition:** The spatial or temporal topic of the resource, the spatial applicability of the resource, or the jurisdiction under which the resource is relevant.
- Comment:** Spatial topic and spatial applicability may be a named place or a location specified by its geographic coordinates. Temporal topic may be a named period, date, or date range. A jurisdiction may be a named administrative entity or a geographic place to which the resource applies. Recommended best practice is to use a controlled vocabulary such as the *Thesaurus of Geographic Names* [TGN]. Where appropriate, named places or time periods can be used in preference to numeric identifiers such as sets of coordinates or date ranges.

Element Name: rights

- Label:** Rights
- Definition:** Information about rights held in and over the resource.
- Comment:** Typically, rights information includes a statement about various property rights associated with the resource, including intellectual property rights.
